

Newsletter of the Building Constructions Department English Course Edition

2nd Edition – 28. September, 2021.

Frequently asked questions (FAQ) on the reforms of the Department

Question: are the midterm exams of Building constructions 4 a requirement criteria?

Answer: Those semesters where there is no exam at the end the midterm exams are still required. The final exam of Building Constructions 4 is being introduced via phasing out system, so the course started in the semester of 2021-2022/I. is an exam free semester, this way the midterm tests are criteria requirements.

Question: Can I take the Comprehensive Exam after Building Constructions 4?

Answer: For this year's class after Building Constructions 4 Building System Methodology (Building Constructions 5) follows, based on this the Comprehensive Exam is suggested by the department after Building Constructions 5, so in the spring exam session, but if a student is confident about their knowledge he or she can take the Comprehensive Exam in the fall semester as they used to (in the curricula it was not changed, it appears in a form of a suggestion from the Department, that students take the Comprehensive Exam after Building Constructions 5). At the same time, according to the current curriculum without passing the Comprehensive Exam, Building Constructions 6 cannot be taken.

Question: Is it obligatory to take an exam of Building Constructions 6?

Answer: the majority of the students took Building Constructions 6T, that is a course without an exam, probably because the exam will cease to exist. To pass the Cumulative Exam according to the current curricular one Building Constructions subject finished with an exam is required, at the same time we will not examine the students in Building Constructions 6 this semester, students shall get offered marks this way we're uniting the practical courses.

Question: If someone took Building Constructions 6T is it necessary to change the registration to Building Constructions 6K?

Answer: The prerequisite of the Cumulative exam is set this way, that those are left out who did not take any course with an exam after the Comprehensive Exam. If the student want to avoid this situation, a post-subject modification can be requested in Neptun to change subjects, by keeping everyone at their current class. The other way we would solve the Cumulative Exam problem student by student which we would like to avoid.

Question: How can we apply to a Building Constructions specialized diploma coercive?

Answer: Students have to apply via a digital application, this form will be found in the Neptun messages when we send it. Those who absolved in the previous semesters and their student status was ceased to exist, they aren't in the system so we will sent them the digital application form by a request (the bank will also be found on the website). Question: What should I do if I were left out of the Teams group of the course?

Answer: If a student wants to join a Teams group we ask you not to ask the professors because they cannot put the student into the group! The Teams administrator of the Department of Building Constructions is Dániel Bakonyi PhD, he can put the student in the group, because he is also the administrator of the Department Information System (in the following; TIR), so at the same time he will put the student in the TIR also, without this the marks of the student will not appear in Neptun!

Question: What role does the Teams groups have this current semester?

Answer: We do all the administrations of the subjects in Teams (material of the presentations, editable practices, uploading schedules, enter results, etc.). The TIR gets the partial results of the students from Teams, and from that the final result will get to Neptun. However the presentations will not be reported (it can be changed due to the pandemic situation). Moreover it is especially important that there is an intensive communication between students and professors, and Teams became an excellent opportunity as it was shown the previous semesters.

28. September, 2021.

Gábor Lajos, Takács PhD
Head of the Department

Gergely, Dobszay PhD
Responsible for Education
